

Load Status Categories: LogiPoint Web Industrial defines six load status categories:

Quote	“Quote” is checked
In Transit	At least one pickup has been made, all deliveries have not been made and “Transfer to Invoice Queue” is not checked
Unassigned	No carrier has been assigned to the load and “Transfer to Invoice Queue” is not checked
Completed	All deliveries have been made but the load is not yet ready for invoicing.
Ready to Invoice	A load is deemed to be ready for invoicing if either the “Transfer to Invoice Queue” box is checked or “Quote” is not checked, all deliveries have been made, customer charges are greater than zero and a carrier has been assigned*.
Invoiced	An invoice has been generated and transferred to QuickBooks
Default	A load does not fall into any of the above categories

You can set the colors corresponding to each of the above statuses in Utilities->Settings. Note, however, that currently the same color serves to indicate both **Completed** and **Ready to Invoice**.

*If “Require Carrier” is **not** checked in Utilities->Settings then a carrier does not have to be assigned.
